How to Setup Xerox B225 Wireless Printer on Computer (Windows)?

If you are a Windows user, setting up a [Xerox printer](#) becomes seamless. As most of the users use Windows computers, this guide is going to be helpful for them. Here we go.

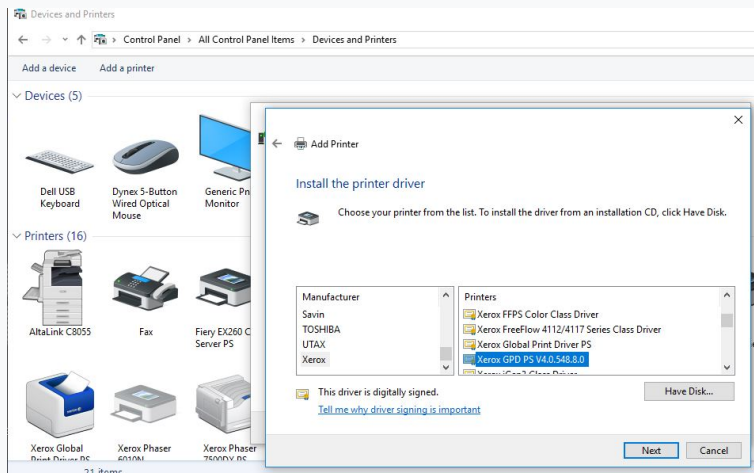

- Go to the **Start menu** on your Windows, and then hit **Settings**.
- Then, click the **Printers & Scanners** option.
- Now, tap **Add a printer** and then **Add a local printer**.

- After that, a page will appear where you have to tap on the **Create a new port** and choose **Standard TCP/IP port**.

- Then, note down the IP address inside the textbox, and then choose **Query the printer, and automatically select the driver to use**.
- Next, a window will appear, and you can see your computer communicating with the printer, and it'll also recognize the latest printer drivers.
- Then, tap on the **Next** button.
- Now, choose **Xerox Global Print Driver PS** and then click **Use the driver that is currently installed**.

- Next, you have to type the printer's name inside the textbox and let the installation complete.
- Now, a screen will open with a printer-sharing option. You can click **Do not share this printer** and tap on the **Next** button.
- After that, once you get the verification message for the successful connection or your Xerox printer to the computer, tap on the **Print a test page**.
- After confirming the message, you can send your page to the Xerox B225 wireless printer and tap on the **Close** button.

Now, the Xerox printer setup is completed. You can print anything with your Xerox printer now. However, if you find that the process is difficult, you can get our help. Our setupwirelessprinter.com website deals with your queries and concerns regarding the printer setup. Head to the [Support section](#), where you'll find the option to **chat** or **call** our technical experts. They will try their best to guide you through the process.

How to Setup Xerox B225 Wireless Printer on Computer (Mac)?

For Mac users, it may be a little difficult to set up their Xerox printers, but not anymore. Here are the steps to easily set up your Xerox printer on Mac easily.

1. In the first step, get the necessary printer drivers from the **Xerox** website.
2. Then, double-click the downloaded drivers file and tap on the **Launch** button.
3. Now, click on the **Agree** option and then tap the **Install** button.
4. After that, you'll see a window where you have to select **Don't see your printer** and click on **Continue**.
5. Put in your Xerox B225 wireless printer name and the **IP address** in the address box.
6. Lastly, tap on the **Continue** button to complete the setup process.

Finally, you have set up your Xerox printer on the Mac system. These are the simplified steps to setup a Xerox printer on your Mac. You can take test prints to check if the printer works well.

Conclusion

Hopefully, this guide may help you to understand [how to setup Xerox B225 wireless printer on computer](#). However, if you have a different Xerox printer, the settings may differ a little bit. But, even if you get an idea to setup your printer, that's more than enough. If you find the setup a little tricky, don't worry you have our support. Our experts are ready **24/7** to provide you with the right solution. So, head to our website, setupwirelessprinter.com and click the [support](#) section. Then, you will have the option to **chat** or **call** us.

Frequently Asked Questions

Question

How to Download Xerox Printer Drivers?

Downloading printer drivers is an important step in the Xerox printer setup. And the manufacturer's website is the best source to get it. Hence, you need to move to the official website, find the **Drivers and Software** section, tap on the **Download** button, extract the downloaded file, and let the installation happen. Once the installation ends, our drivers are in.

Question

How to Setup My Xerox Printer to Computer Wirelessly?

There are various methods to connect your Xerox printer to the computer wirelessly. For instance:

- WPS connection
- Wi-Fi wizard
- Manual setup

However, the best connection is a wired connection, such as a USB and Ethernet connection because the wireless connection may be interrupted due to weak signal or weather conditions, but a wired connection would be ideal in every situation.

Question

How to Connect a WPS Printer to My Computer?

To connect your WPS Xerox printer to the computer, install the devices near the Wi-Fi router. Then, activate the WPS connection mode in the printer. Usually, the printers have a touchscreen control panel. So, go to the **Setup** under the **Control Panel** and click **Network** and then **Wireless settings menu**. Next, choose the **Wi-Fi Protected Setup**, click the Push button and click **Start**.
